

Coastal bathymetry from satellite and its use on coastal modelling

Rodolfo Bolaños

Lars Boye Hansen, Mikkel Lydholm Rasmussen, Maziar Golestani, Jesper Sandvig Mariegaard, Lisbeth Tangaa Nielsen

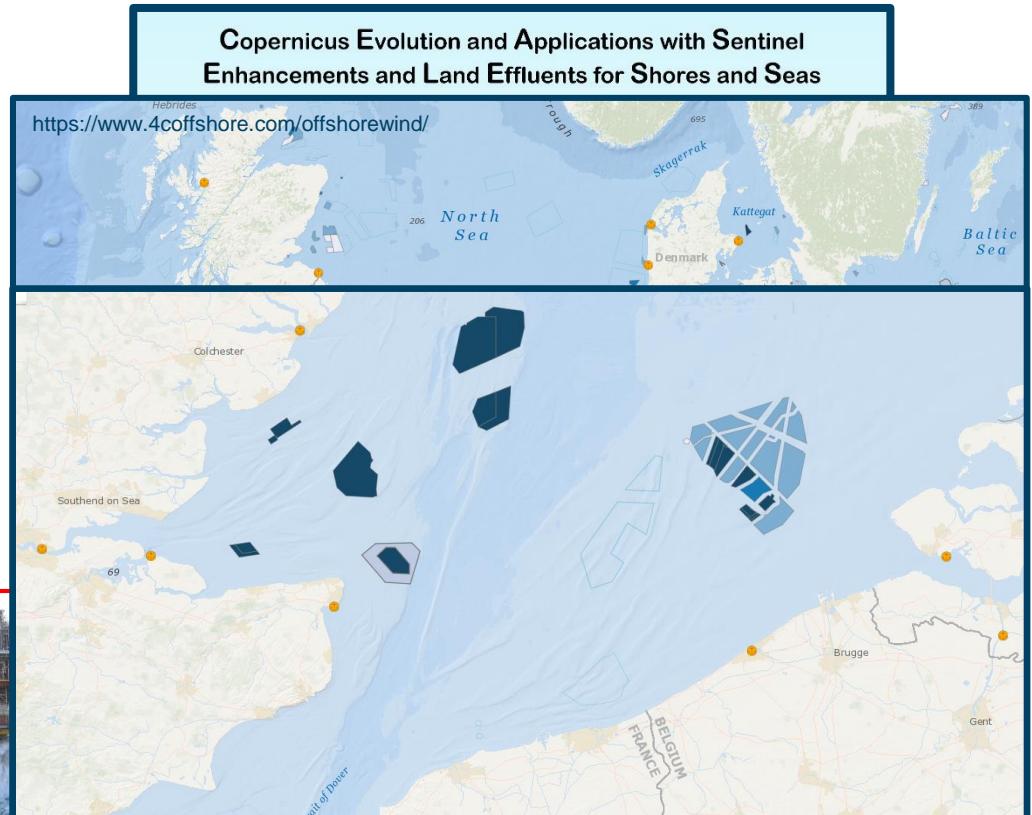

Agenda

- Background
- Objective
- Tools and case study
 - SDB
 - Spectral wave model
 - MIKE3 wave FM
- Conclusions

Background

- Satellite developments
- Coastal developments
 - OWF
 - Harbours
 - Oil and gas
- Metocean studies (EVA , H_{m0} , H_{max} ,....)
 - Normal conditions
 - Extreme conditions

Objective

- High resolution bathymetry

+

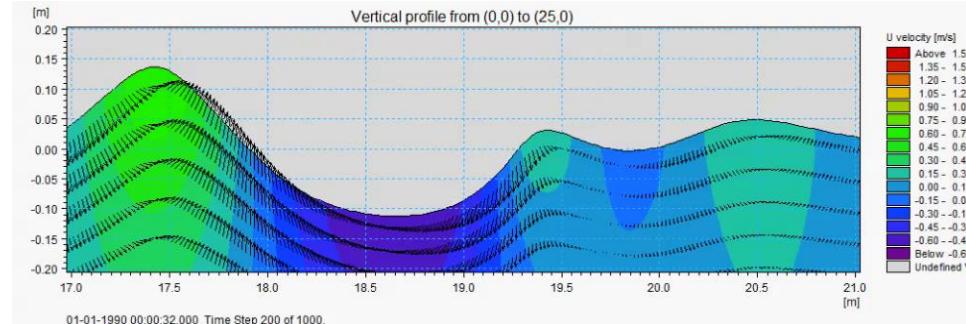

- Coastal wave modelling

↓

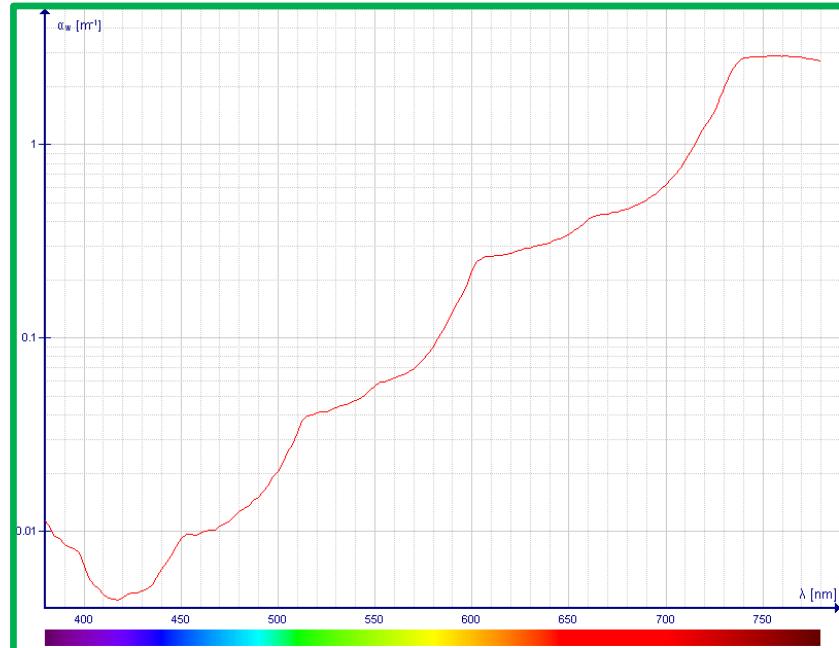

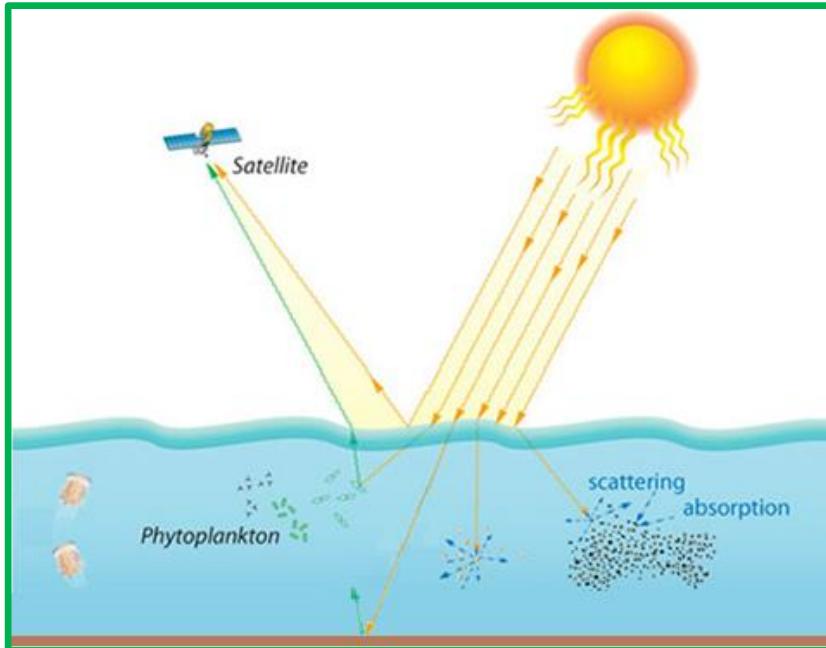

Better metocean conditions

Case study: Horns Rev

High resolution bathymetry for coastal wave modelling

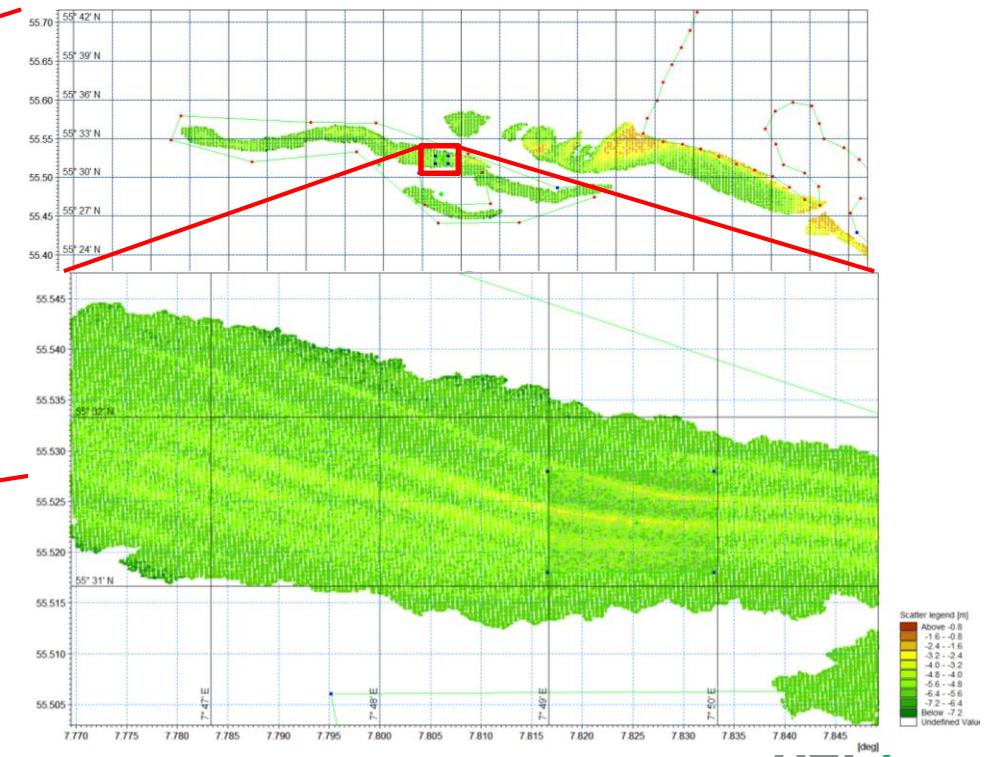

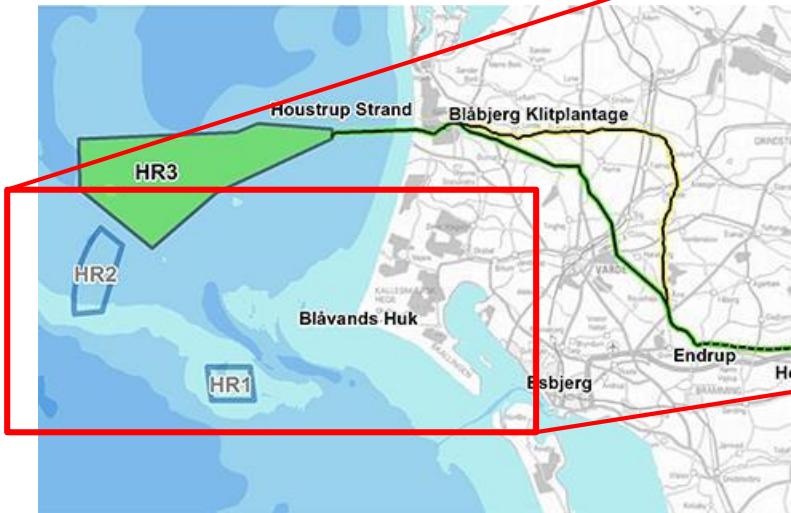

Case study

- Satellite Bathymetry

<https://www.esa.int/spaceinimages/Images/2012/02/Sentinel-2>

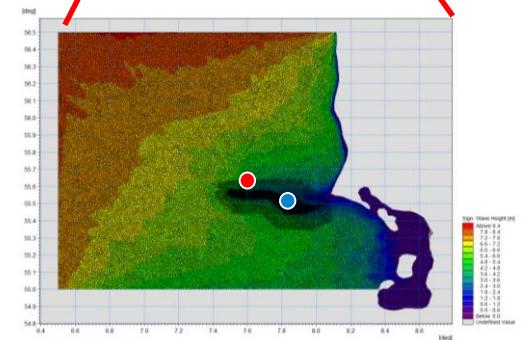

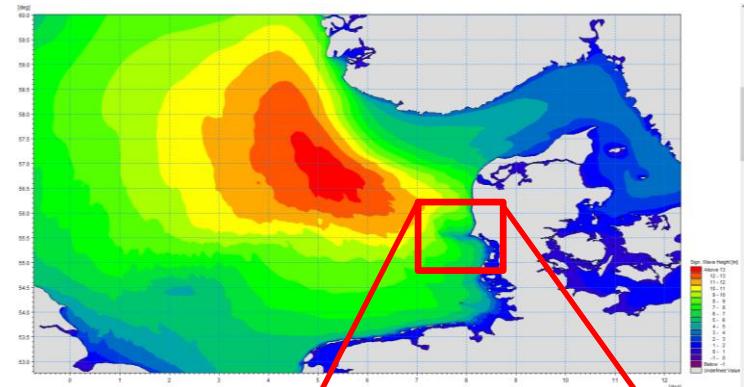

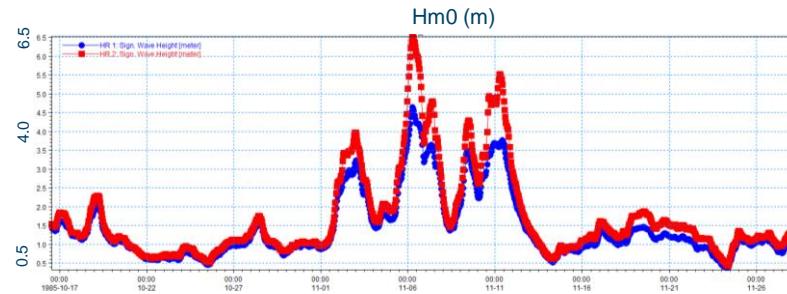

Spectral wave modelling. MIKE21 SW

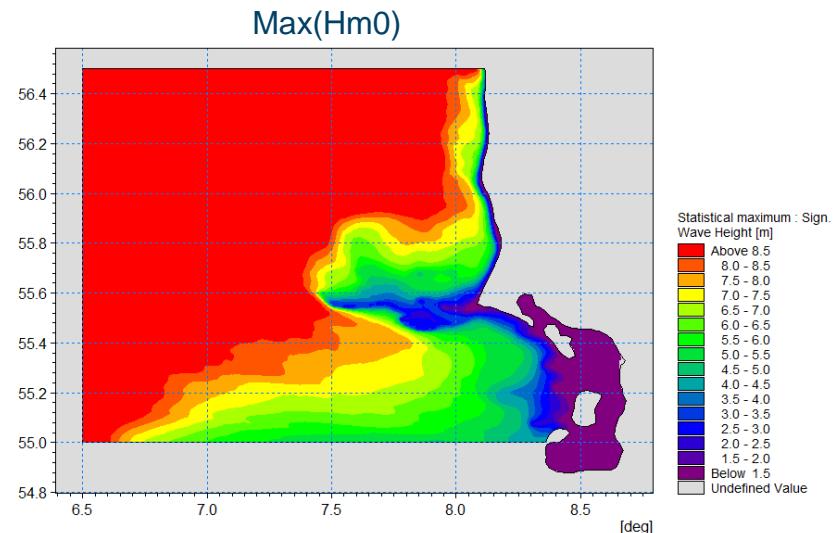

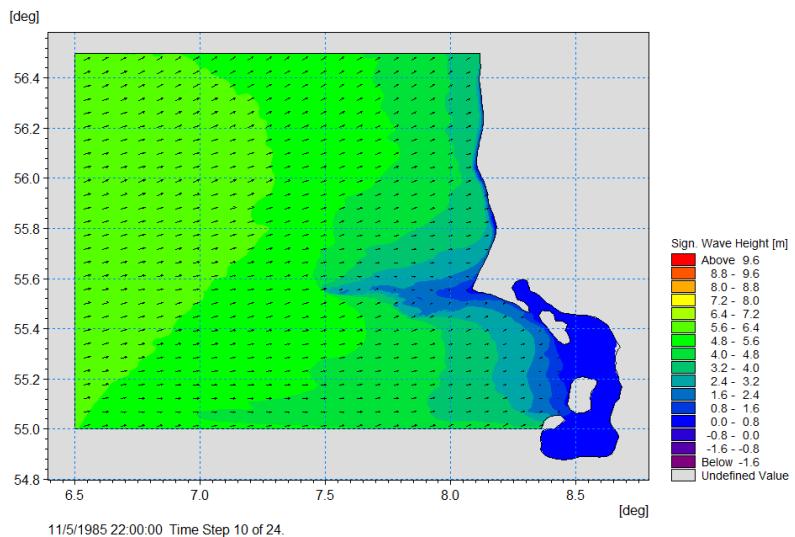

- 3rd generation spectral wave model
- Flexible mesh
- Janssen (1991)
- Spherical or Cartesian coordinates
- Wind stress from wind-wave coupling or wind C_D
- Stability corrected winds, air-water density ratio, surface current....

Downscaling

- CFSR
- Bathymetry: SDB + Emodnet
- 6/11/1985 (NW)
- Resolutions: 800-25 m

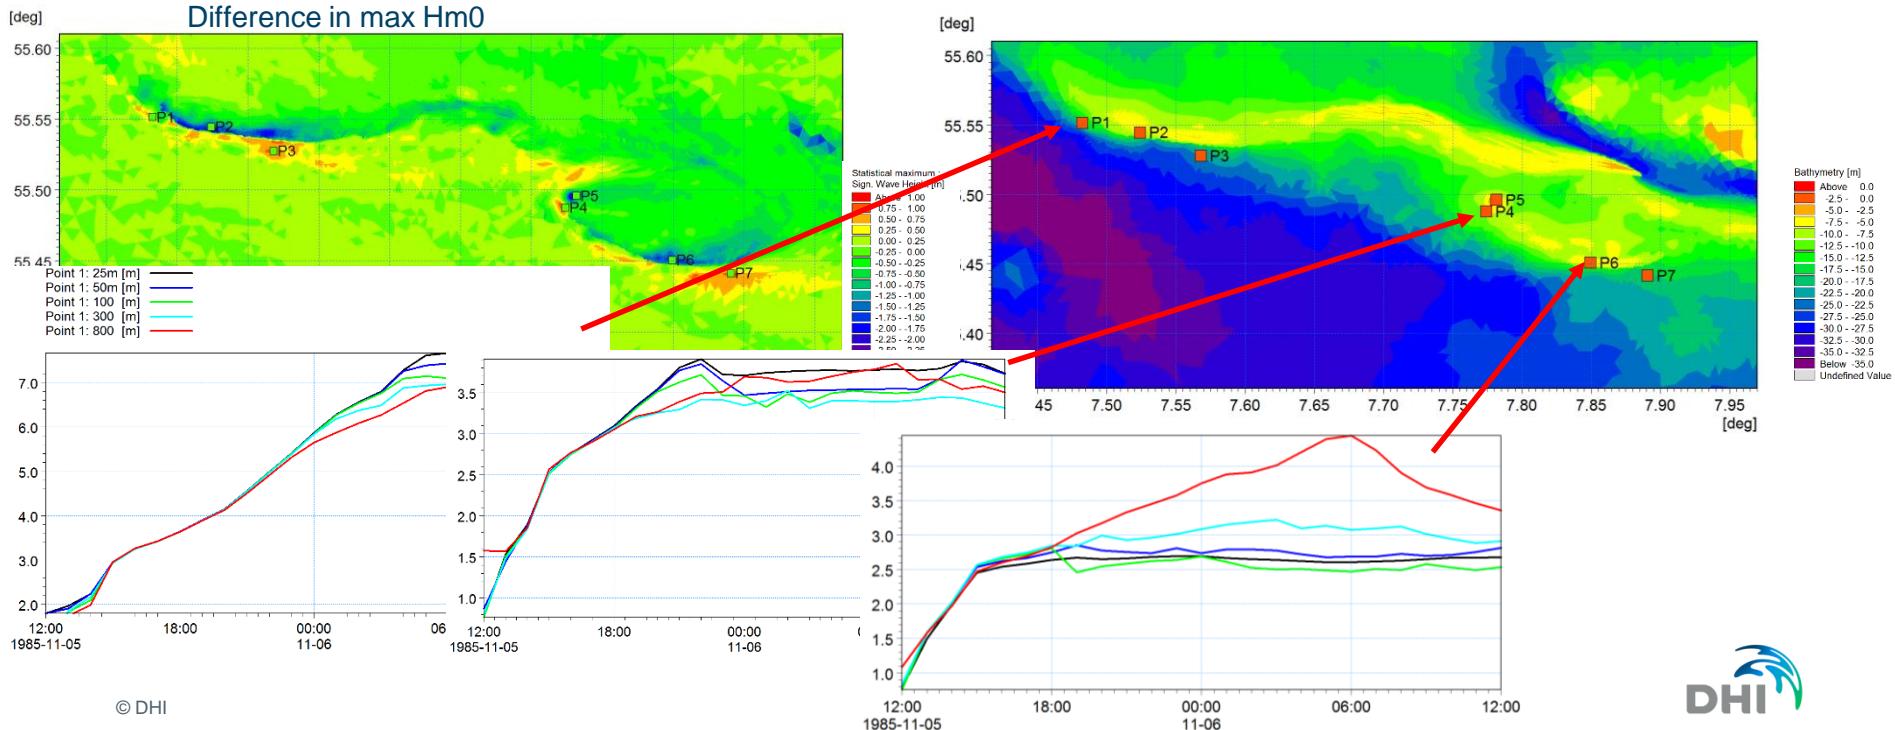

MIKE21 SW Results

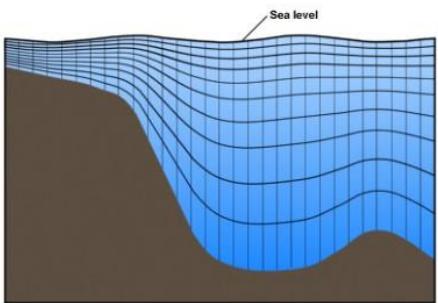

MIKE21 SW Results

Mesh resolution (25m vs 800m)

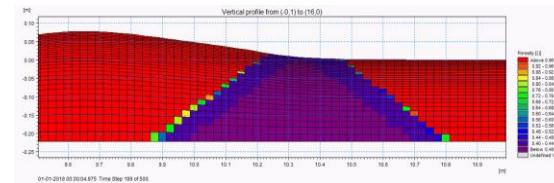

The new wave model MIKE 3 wave FM

Sigma Vertical Coordinate System

Navier-Stokes solver (in MIKE3FM framework)

A new 3D model - why?

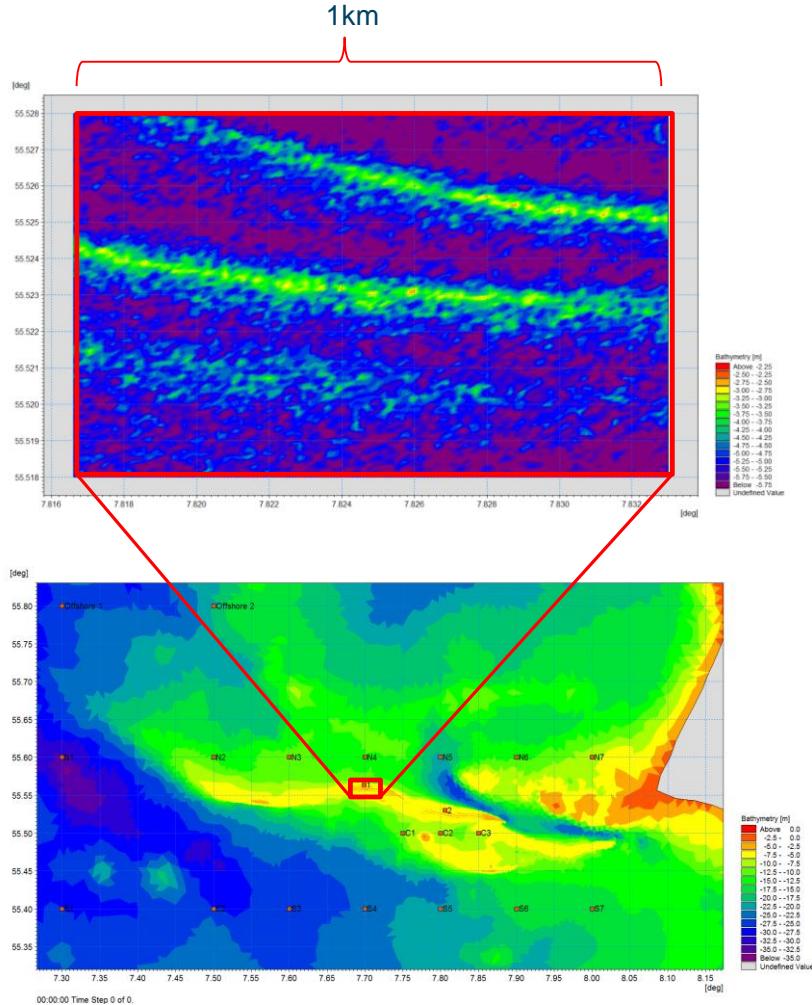

- We need a 3D **wave** for complicated jobs e.g.
 - Wave kinematics
 - Wave transformation for offshore wind farms at 30m depth
 - Navigation channels in exposed areas
 - Wave-current interaction
- We need a better 3D **flow** model for some difficult tasks
 - Mixing e.g. subsea outlets (e.g. cooling water)
 - Stratification
 - Internal waves

$$\frac{\partial h}{\partial t} + \nabla \cdot \mathbf{U} = 0 \quad \frac{\partial \mathbf{U}}{\partial t} + \nabla \cdot \mathbf{F}(\mathbf{U}) = \mathbf{S}_h + \mathbf{S}_q + \mathbf{S}_p$$

- Continuity equation
- Momentum equation
- Condition for the free surface
- ... and boundary conditions

MIKE3 wave FM

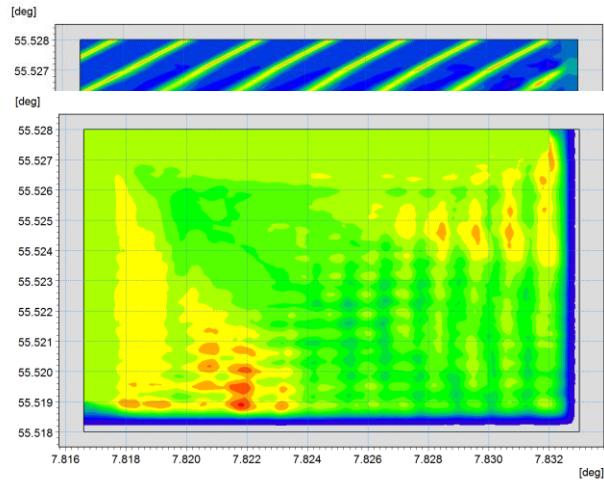

- Tests
 - Flat bottom /real bathymetry
 - Regular/irregular waves as BC
 - Rectangular mesh (2 m), 10 sig.
 - Generation zone / sponge zone
 - Bottom friction

MIKE3 wave FM Results

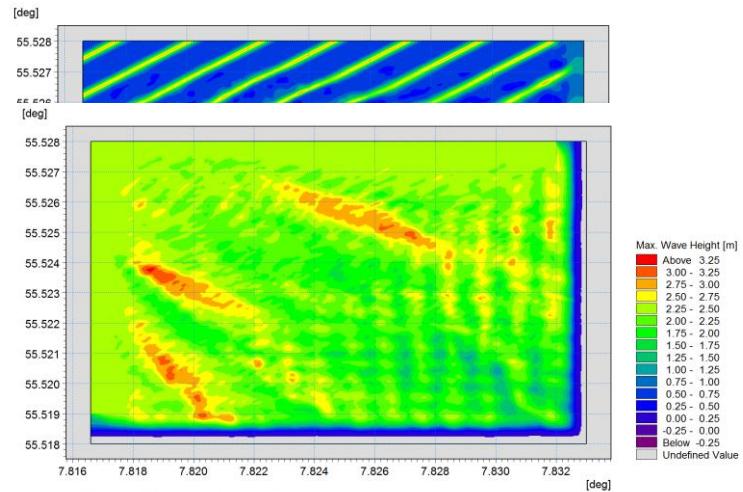

- Regular waves ($h=2.3m$; $T=13s$; Dir= 350°)

Flat

H_{max}

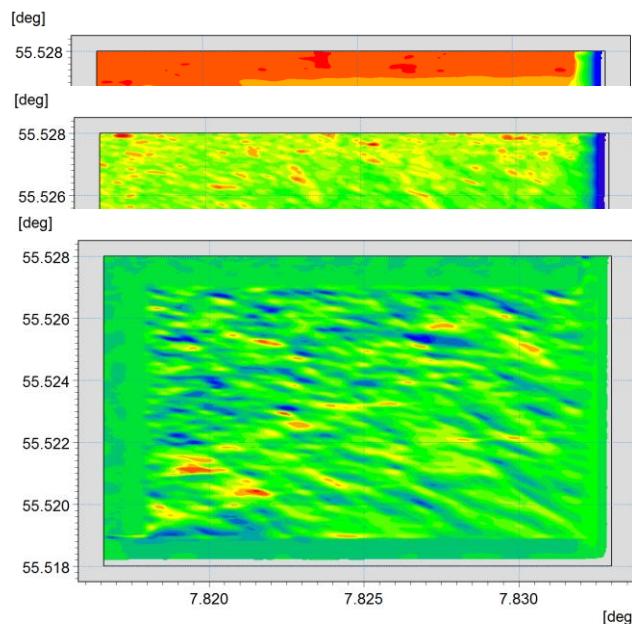

Real

MIKE3 wave FM Results

- Irregular waves

MIKE3 wave FM Results

- Irregular waves

MIKE3 wave FM Results. Hmax

- SW vs MIKE3

$\text{Max}(H_{max}) = 4.4 \text{ m}$
 $\text{Mean}(H_{max}) = 2.7 \text{ m}$

Conclusions

- **SDB**
 - Successful high res bathymetry (< 7 m)
 - Limitations due to environmental conditions
- **MIKE21SW Vs MIKE3 wave FM**
 - SW sensitive to high res bathymetry (20% Hm_0)
 - MIKE3 wave FM can provide detailed wave transformation/kinematics
 - Potential differences in parameters such as H_{max}

NEXT

SDB: deeper areas? Validation with in-situ data

Wave models: Generation zone tests, validations,.....
